

ABSTRACT OF THE DISCLOSURE

5 A utility ladder for illuminating a work area that a user is
working on. The utility ladder includes a ladder assembly being
designed for being positioned on a support surface. The ladder
assembly is designed for supporting the user at a desired height
above the support surface when the user is standing on the ladder
10 assembly. A lighting assembly is coupled to the ladder assembly.
The lighting assembly is designed for being selectively
operationally coupled to a power source whereby the lighting
assembly is for selectively emitting light to illuminate the work
area the user is working on when the lighting assembly is
15 operationally coupled to the power source.
